

JIHAD EL ZOHBI

Project Engineer, Maripoma Enterprise Limited

PROFESSIONAL OVERVIEW

Project Engineer and Highway Design Engineer with over 20 years of experience in the design, execution, and management of highway, urban road, infrastructure, and building projects across the Middle East and GCC.

Strong expertise in highway and urban road design, including horizontal and vertical alignments, plan and profile drawings, cross-sections, engineering modelling, design coordination, and quantity take-off and BOQ preparation.

Experienced in project and site engineering, coordinating with consultants, contractors, and design teams, monitoring progress, resolving technical issues, and ensuring compliance with drawings, specifications, quality, cost, and schedule requirements.

Highly proficient in highway design and engineering software, supported by solid experience in topographic surveying and survey data processing, providing an integrated approach between design, surveying, and construction.

WORK EXPERIENCE

MARIPOMA ENTERPRISE LIMITED (2019-NOW)

Accra-Tema Motorway and extensions project (2024 – now)

Involved in the design coordination and construction execution of major highway, interchange, bridge and associated infrastructure works forming part of the Accra–Tema Motorway Reconstruction and Expansion Project. Responsibilities included coordinating and reviewing road design drawings, bridge and interchange drawings, construction details and shop drawings prior to implementation. Participated in resolving design interfaces between the motorway, interchanges, bridges, underpasses, drainage systems, utility works and other associated infrastructure.

Worked closely with the Consultant, designers, site engineers and construction teams in reviewing technical submissions, responding to design comments, incorporating approved revisions and ensuring that construction drawings accurately reflected site conditions and project requirements.

Also contributed to quantity take-off, measurement and verification of executed construction works, supporting progress assessment, quantity control and evaluation of completed activities. Undertook technical monitoring of project progress and ongoing construction activities, including review of site progress against approved drawings, specifications and construction requirements.

Provided technical support during construction, supervised execution of road, bridge, interchange and associated infrastructure works, and assisted in resolving design and construction conflicts encountered on site to maintain project quality, accuracy and progress.

EDUCATION

Master in Topographic Engineering (M2)

- Lebanese Canadian University (LCU), 2020

Bachelor in Topography- Lebanese Canadian University (LCU), 2015–2017

Bachelor Technique in Topography (LT2)- Beirut- Dekwaneh, 2008–2009

TS3 – General Building, Construction & Topography- North Lebanon-Deir Ammar, 2002–2003

PREVIOUS EMPLOYERS

- MOAWAD – EDDEH S.A.R.L
- BATCO COMPANY
- ASPHALT HAMAT
- BINACO
- SOMAC/AFK

TECHNICAL EXPERTISE

- Design Drawings & Shop Drawings Preparation
- Road Geometry & Alignment Control
- Team Coordination & Stakeholder Communication
- Quantity Take-Offs & BOQ Preparation
- Construction Coordination & Site Supervision
- Budgeting & Cost Control
- Problem Solving in Complex Site Conditions

SOFTWARE & TECHNICAL SKILLS

- AutoCAD
- Autodesk Civil 3D
- Autodesk InfraWorks
- Autodesk Revit
- GIS
- Agisoft Metashape
- Microsoft Office
- Project Management

CORE ENGINEERING SKILLS

- Highway & Road Design
- Road Geometry, Alignments & Profiles
- Land Surveying & Setting Out
- Construction & Shop Drawings
- Quantity Take-Off, Measurement & BOQ Preparation
- Design Coordination & Technical Review
- Construction Supervision & Site Engineering
- Traffic Management Plans (TMP)

Reconstruction and rehabilitation of Ofankor - Nsawam road dual carriageway - 33.4 km, ghana (2020 – now)

Contributed to the design coordination, engineering, and construction execution of the 33.4 km Ofankor-Nsawam Dual Carriageway Project. Responsible for preparing and developing road design drawings, construction drawings, and Shop Drawings required for roadworks and associated civil works, including design modifications arising from actual site conditions.

Prepared and coordinated road plan drawings, horizontal and vertical profiles, cross-sections, drainage systems, intersections, and related infrastructure works, while working closely with the Consultant and project engineering teams to address technical comments, resolve design - site discrepancies, and incorporate approved design revisions.

Responsible for measurement and quantity take-off of executed works, covering major road and infrastructure items, supporting quantity verification, interim measurements, and assessment of work progress.

Provided continuous technical and site engineering support, monitoring construction activities to ensure compliance with approved drawings, technical specifications, quality requirements, and project schedule, while assisting in resolving design and construction challenges to achieve accurate, efficient, and constructible project delivery.

Key Responsibilities: Highway & Urban Road Design · Road Design Drawings · Shop Drawings · Plan & Profile · Cross-Sections · Drainage Design · Intersection Design · Quantity Take-Off & Measurement · Design Coordination · Consultant Coordination · Site Engineering · Construction Supervision · Infrastructure Works.

Mouawad-Eddeh S.A.R.L. (2012-2020)

REHABILITATION OF TANOURINE EL TAHTA – TANOURINE EL FAWKA ROAD (CDR), LEBANON (12KM)

Responsible for the design and engineering development of the road rehabilitation works, including construction and Shop Drawings, road alignment, levels, longitudinal profiles, pavement works, drainage, and associated infrastructure, adapting designs to actual site conditions.

Coordinated directly with the Project Engineers and Consultant to resolve technical comments and design discrepancies, and provided technical support and supervision during construction to ensure compliance with approved drawings, specifications, and quality requirements.

Prepared and coordinated survey data for design and construction activities, and followed up on project quantities, measurements, and interim payment statements with the Consultant and Head Office.

Key Responsibilities: Highway Design · Road Rehabilitation · Shop Drawings · Alignment & Profiles · Pavement & Drainage · Site Engineering · Construction Supervision · Survey Data · Quantity Measurement · Interim Statements
Key Exposure: Highway Design · Road Rehabilitation · Construction Drawings · Shop Drawings · Road Profiles · Consultant Coordination · Construction Supervision

GROUND WATER DAM IN BALAA (CDR), LEBANON

Contributed to the engineering coordination and construction execution of the Balaa Ground Water Dam project.

Responsibilities included reviewing design information and preparing detailed shop drawings and construction drawings required for the execution of civil and structural works. Coordinated drawings with project engineers to ensure that structural elements, levels, dimensions and associated infrastructure were correctly integrated.

Supported technical coordination with the Consultant, addressed comments and site-related design issues, and assisted in incorporating approved modifications into construction documentation.

Supervised construction activities and verified that executed works complied with approved drawings, engineering requirements and project specifications.

Key Exposure: Civil & Structural Drawings • Shop Drawing Preparation • Design Coordination • Consultant Coordination • Construction Supervision • Technical Site Execution

VILLA ABADIYI – ALEY, MOUNT LEBANON

Participated in the preparation and coordination of construction drawings and shop drawings for the execution of Villa Abadiyi in Mount Lebanon.

Responsibilities included coordinating architectural, structural and civil design information, preparing detailed drawings for implementation and resolving discrepancies between drawings and actual site conditions.

Worked closely with the project engineers and construction teams to provide technical clarification and ensure correct interpretation of approved drawings during execution. Supervised construction activities, checked dimensions, levels and interfaces between different elements, and assisted in preparing as-built documentation reflecting the completed works.

Key Exposure: Construction Drawings • Structural & Civil Coordination • Shop Drawings • Design Coordination • Construction Supervision

JORD AKKAR WATER SUPPLY SYSTEM (CDR), NORTH LEBANON (136091 km)

Contributed to the design coordination and construction execution of the Jord Akkar Water Supply System.

Responsibilities included reviewing infrastructure design drawings and preparing detailed shop drawings and construction drawings for pipelines, associated structures and civil works. Participated in coordinating alignments, profiles, levels and interfaces between the water network and existing infrastructure. Worked with project engineers and the Consultant to address technical comments, resolve design conflicts and modify drawings where necessary to accommodate actual site conditions.

Supported and supervised construction execution to ensure that pipelines and associated infrastructure were constructed in accordance with approved drawings, specifications and required levels.

Key Exposure: Infrastructure Design • Construction Drawings • Shop Drawings • Pipeline Profiles & Alignments • Consultant Coordination • Construction Supervision

CHEKKA – ENFE WATER SUPPLY SYSTEM (CDR), NORTH LEBANON (215 km)

Participated in the engineering design coordination and construction execution of the Chekka–Enfe Water Supply System.

Prepared and coordinated shop drawings and construction details for the water network and associated infrastructure, including the integration of alignments, levels and structures with existing site conditions.

Worked closely with project engineers and the Consultant to review drawings, resolve technical issues and incorporate required design modifications prior to implementation.

Provided technical assistance to site teams and supervised construction activities to ensure that works were executed accurately and in compliance with approved drawings and project specifications.

Key Exposure: Infrastructure Drawings • Shop Drawing Design • Design Coordination • Consultant Coordination • Construction Supervision • Technical Site Support

BATCO Group- (2010-2012)

UPGRADING OF TRIPOLI'S INFRASTRUCTURE – PHASE I, PACKAGE 1A (CDR), LEBANON

Contributed to the preparation and coordination of design and construction drawings for the upgrading of Tripoli's urban infrastructure.

Responsibilities included reviewing existing conditions and design information, preparing detailed shop drawings, coordinating road and infrastructure layouts and developing drawings required for site execution.

Participated in coordinating infrastructure interfaces and resolving conflicts between proposed works and existing utilities and urban conditions.

Worked with engineers and construction teams to ensure that approved drawings were correctly implemented and prepared as-built drawings documenting the completed infrastructure works.

Key Exposure: Road & Infrastructure Design • Shop Drawings • Construction Drawings • Utility Coordination • Construction Supervision • As-Built Documentation

Mouawad-Eddeh S.A.R.L. (2007-2010)

RENEWAL OF WATER PIPES – TRIPOLI, LEBANON (CDR)

Participated in the design coordination and execution of the renewal of water pipelines throughout Tripoli.

Responsibilities included preparing and coordinating shop drawings, pipeline layouts, profiles and construction details required for site implementation. Reviewed the relationship between the proposed pipeline network, existing roads, utilities and surrounding infrastructure and assisted in resolving conflicts encountered during construction.

Provided plan drawings and technical information to site teams and coordinated required changes with project engineers.

Supervised construction activities to ensure that pipeline works and reinstatement works were executed in accordance with approved drawings, technical requirements and specifications.

Key Exposure: Infrastructure Design • Shop Drawings • Pipeline Design Coordination • Road & Utility Interfaces • Construction Supervision.

UCO Company (2006-2007)

CONSTRUCTION OF DEIR AMMAR PUBLIC SCHOOL (CDR), LEBANON

Supported the preparation and implementation of construction drawings for the Deir Ammar Public School project.

Responsibilities included interpreting architectural and structural design drawings, preparing information required for site execution and coordinating building dimensions, levels and structural elements.

Assisted site teams during construction and prepared as-built drawings reflecting the completed works. Also contributed to checking executed works against approved drawings and resolving drawing-related issues encountered during implementation.

Key Exposure: Architectural & Structural Drawings • Construction Execution • Drawing Coordination • Site Supervision • As-Built Drawings

Somak-Afak – World Bank Funded (2004-2006)

CULTURAL HERITAGE AND URBAN DEVELOPMENT PROJECT – BYBLOS, LEBANON

Contributed to the implementation of urban infrastructure and public-realm improvement works forming part of the Cultural Heritage and Urban Development Project in Byblos.

Responsibilities included reviewing project drawings, preparing information required for construction, coordinating proposed infrastructure with existing urban conditions and supporting the implementation of roads, public spaces and associated civil works.

Participated in resolving site conditions affecting the approved design and supported construction teams during execution. Prepared as-built drawings documenting completed infrastructure and urban development works.

Key Exposure: Urban Infrastructure Design • Road & Public Realm Works • Construction Drawings • Design Coordination • Construction Supervision • As-Built Documentation

Asphalt Hamat (2002-2004)

CONSTRUCTION OF KFAR-HARRA TO ALBIRI ROAD – AKKAR, NORTH LEBANON (12 km)

Participated in the design interpretation and construction execution of the Kfar-Harra to Albiri Road project.

Responsibilities included working with road alignment drawings, longitudinal profiles, cross-sections and construction details required for the implementation of earthworks, pavement and associated road works.

Supported the construction team in translating the approved highway design into site execution, coordinating levels and geometric requirements and resolving discrepancies encountered during construction.

Assisted in monitoring construction works to ensure compliance with design drawings, road geometry and technical specifications.

Key Exposure: Highway Construction • Road Design Drawings • Longitudinal Profiles & Cross-Sections • Road Geometry • Construction Supervision

CONSTRUCTION OF CHADRA TO MACHTA HAMOUD ROAD – AKKAR,NORTH LEBANON (6 km)

Contributed to the implementation of the Chadra–Machta Hamoud Road through interpretation and coordination of road design and construction drawings.

Worked with road alignment, profile and cross-sectional information to guide the execution of earthworks, pavement construction and associated infrastructure.

Supported the resolution of geometric and site-related issues during construction and assisted the construction team in ensuring that road levels, alignment and pavement works complied with the approved design.

Key Exposure: Road Design & Execution • Highway Drawings • Road Alignment & Profiles • Earthworks • Pavement Construction • Construction Supervision

BINACO(2001-2002)

WATER PROVISION FOR SOUTH LEBANON – AGRICULTURAL AND POTABLE WATER CHANNEL

Participated in the execution and technical coordination of the water conveyance infrastructure serving agricultural and potable water requirements in South Lebanon.

Responsibilities included reviewing and interpreting design drawings, coordinating channel alignment and levels, providing construction information to site teams and assisting in resolving design and execution issues.

Supported the supervision of civil works to ensure that the water channel and associated infrastructure were constructed in accordance with design requirements and approved construction information.

Key Exposure: Infrastructure Drawings • Civil Works Execution • Design Coordination • Construction Supervision • Technical Site Support

REHABILITATION AND MAINTENANCE OF HAMMENA ROAD

Participated in the execution of road rehabilitation and maintenance works for Hammena Road.

Responsibilities included reviewing road construction drawings and existing road conditions, coordinating rehabilitation requirements and supporting the implementation of pavement, alignment and associated civil works.

Provided technical support during construction to ensure that rehabilitation works followed the intended road geometry, levels and design requirements and assisted in resolving site-related execution issues.

Key Exposure: Road Rehabilitation • Highway Construction Drawings • Road Geometry • Construction Execution • Site Coordination • Construction Supervision
